A Canadian Company Established Since 1975

## Winter 2019 Newsletter

### Doors are Made to Fit Just Right

- We do not "cut" our doors, we make doors to exactly what size you order them.
- The standard height is 80" & even width measurements (28", 30", 32" etc.) are standard sizes.
- We can make whatever size you require & with a small custom fee we can make odd sizes as small as an 1/8" to get that perfect fit.
- If you cut your doors, you will void the warranty & compromise the integrity of the door leading to warpage.
- doors are centrepieces of your home so cutting the stiles/rails can offset the door handle or even make the door appear to be upside down.

### Tip of the Month

- For Pocket Doors we add 3/4" to one side, this keeps the doors symmetry when it is closed and part of the door is still left in the pocket.

## 3 Panel Types to Compliment Any Look

### Panel Types

#### - Shaker Panel (#500 Series) -

Simple & streamline profile to maintain the clean lines of your modern themed home.

#### - Flat Panel (#600 Series) -

Hybrid look between the more traditional & modern looking panels which is great for smaller spaces.

#### - Raised Panel (#700 Series) -

Traditional panel which has a heavy & profound profile, great for maintaining your classical look & adorning large areas.

### Door of the Season

- A modified version of our door style #84.

- Stained beautifully with a light colour, this accentuates the beauty of the wood and does not overpower the subtle elegance of the frosted glass.

- Exterior Doors can also be made as a Pre Hung unit, they can be set up as a single door, double doors, with side lites and even a transom as well.

**#84(M): Rice Paper**
